

SCRAM™

HOUSE ARREST

House Arrest, built for today's homes.

Introducing SCRAM House Arrest™, a standalone home curfew system that fully integrates in a single software application with our SCRAM Systems® suite of electronic monitoring technologies.

SCRAM Continuous Alcohol Monitoring™

Continuous Alcohol Monitoring (CAM), or combined CAM + House Arrest, at the flip of a switch. It's 24/7 monitoring for your high-risk/high-need alcohol clients.

SCRAM Remote Breath™

The first and only handheld, wireless, portable breath alcohol device with automated facial recognition and GPS with every single test. For your lower-risk clients or those who need or have earned less intensive monitoring.

SCRAM GPS™

A one-piece Global Positioning System that combines superior location monitoring accuracy and 2-way offender communication with an industry-leading strap design that virtually eliminates false alerts. SCRAM Systems offers GPS solutions on all cellular networks to provide comprehensive location monitoring options.

SCRAM House Arrest™

Standalone house arrest monitoring built to work with today's home communications systems. Operates over home Internet routers, standard or digital phone lines, DSL, Vonage®, or an optional SCRAM-provided wireless system.

SCRAM Systems Program Management Center™

The SCRAMNET™ secure web application is the core of the Project Management Center (PMC), which brings together everything from monitoring of our entire product line to our best-in-industry court support program, 24/7 customer support, mobile applications, offender compliance analytics, and beyond.

"An RF technology with flexible connectivity is exactly what our clients need. A reliable RF system that integrates into the same software as SCRAM's GPS, Continuous Alcohol Monitoring, and Remote Breath technologies—with one log on—is exactly what we need."

— Larry Vanderwoude, LCDC
CEO, Recovery Healthcare Corporation

The Most Flexible House Arrest System on the Market

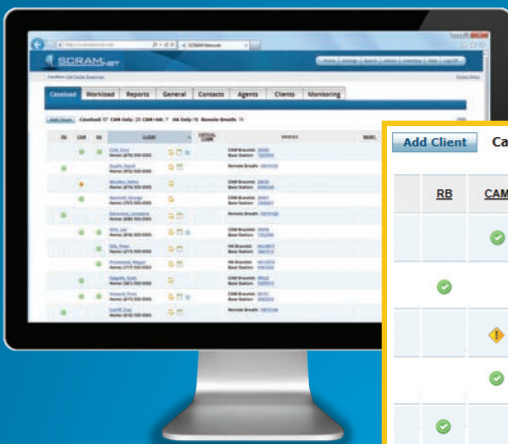

- Only a little more than half of U.S. homes have a landline telephone
- Older systems, designed around landlines, have become difficult to manage in today's homes
- SCRAM House Arrest transmits over any available communication method—landline, cellular, or home Internet service

SCRAM Systems Suite of Products

Fully integrates with all **SCRAM Systems technologies** on the **SCRAMNET** software platform

FEATURES

- Standalone RF system
- Optimized to work on all home communications systems
- POTS, digital, DSL, Vonage®, cable telephone, home Internet, and cellular options
- Multiple anti-tamper systems
- Body mass, temperature, and IR detection
- Cut-strap detection
- Waterproof
- Smallest RF system available
- Offers variable range and settings
- One-year field replaceable battery
- Single software log on to manage SCRAM CAM, Remote Breath, GPS, and House Arrest
- Digital LCD display for easy install and offender communication

BENEFITS

- Transmits over any available communication method in today's homes
- Eliminates the challenge of homes that no longer have Plain Old Telephone Service (POTS)
- Integrates with SCRAMNET—one company, one integrated system for every client
- Reliable tamper technology means false alerts are substantially reduced
- Multiple technologies, the same SCRAM Systems dynamic training, court support, and 24/7 customer service
